

DNREC Enterprise Affinity Projects

IT Strategic Plan

Enterprise Content Management: Deploy information management agency-wide thru a series of phases as maturity increases, including document management, data management, and workflow processes.

Business Process Optimization: Review, align and re-engineer agency business processes, establishing repeatable practices, and maximizing the value of forthcoming information technology solutions.

MS Access Review: Identify and analyze mission critical MS Access applications. Provide a roadmap to address risk reduction through sustainable application solutions.

DNREC Project Management Tool: Standardize a platform for managing projects, resources, facilities and other efforts within DNREC.

Records Policy and Archive: Update agency records retention schedules. Inventory and archive records in accordance with updated policies to ensure proper handling of agency records and accurate publication of records in new ECM and Web platforms.

Web Revitalization: Build a streamlined, well-designed, responsive and easy to use public website that links to documents, information and data in the ECM system, and is coordinated with DNREC's various social media initiatives.

Application Inventory Review and Assessment: Review 231 DNREC applications to determine overlap and set direction forward to reduce platforms and increase efficiency

SharePoint Upgrade: Upgrade SharePoint databases and applications to ensure development of internal applications and to support existing public-facing web content.

SQL Server Upgrade: Upgrade SQL server environments – both test and prod to facilitate above efforts.

Training and Continuous Improvement

DNREC Enterprise Goals
